### ① Needle shape

#### Reverse cutting edge needle

The cross-section of the needle is V-shaped. The cutting edge is located on the curved outside, and the inside corresponds to the base of the triangle. This type is primarily suitable for hard tissue that is difficult to puncture.

#### Cut taper needle

The tip of the taper point needle has a sharp triangular-shaped cutting edge, making it suitable for suturing hard tissue.

#### Taper point needle (large taper)

The tip is thick and highly resistant to bending, making this type suitable for suturing hard tissue.

#### Taper point needle (small taper)

The tip is thin and sharp, making this type primarily suitable for suturing soft tissue.

### ② Curvature type

Code	Curvature	Shape
<b>S</b>	Straight	
<b>E</b>	Slightly curved (3/8 circle)	
<b>H</b>	Heavily curved (1/2 circle)	
<b>J</b>	Hooked (4/5 curved)	
<b>L</b>	Hooked (1/2 curved)	

### ③ Length (overall)
